The Ettersburg Strawberry

ORIGINATED BY
ALBERT F. ETTER
BRICELAND, CAL.

They are very productive and exceedingly hardy and will thrive and do well where others die; will stand more alkali than any others.

They are a cross from a hybrid of Rose Ettersburg and the Cape Mendocino beach strawberry, so are remarkably sweet and fine flavored. I have selected four kinds which are most suitable to Southern California.

Described below as follows:

No. 80—Is the largest and most solid of the 4 kinds; it is very productive of fine red berries; blossoms large and runners strong. The plant is extra vigorous and deep rooted; the fruit of the finest quality and an excellent canning berry.

No. 84—A sister plant to No. 80; has a conical berry that is extra well flavored, but more juicy; Color: a deep glassy red. A profuse bearer; foliage, is very large, coarse leathery and heat resisting.

No. 111.—A sister plant to No. 80 of more dwarf growth than the two preceding No. 111 leans to the Sharpless type, but the flavor is very good and extra fine for preserves, but not rated for a good canner, but is equal to ordinary varieties and gives every indication of an all summer bearer when irrigated.

No. 89—A Hybrid Marshall and Cape Mendocino Beach; dark green foliage, and inclined to make massive plants, with few runners. Exceedingly productive of very dark red berries of uniform size and fine flavor.

December is best time for planting. They have produced two crops for me the first year.

Prices 25 cents per dozen; 75 cents per 100; \$5.00 per 1000.

While they last, Wagner's Giant Rhubarb Seed, 0c per oz.; Success Red Raspberry, 10c each; 85c per doz; Loganberries, 8c each, 75c per dozen; Mammoth Black Berry, 10c each; 85c per dozen, prepaid.

GROWN AND SOLD BY
S. H. NOTLEY
